

Walk a day

Follow Thursday, October 1, 2026, from the photo of the route back to the orders, then forward to the bake list and the bill. Sign in first. Stay on Staging. Look, and do not save.

On the office copy of the bakery's data, that Thursday had **51 orders, 25 stops placed on routes**, and **16 deliveries confirmed** in the software. Van loads were not recorded, and the production plan was not committed. You are supposed to notice those gaps. A tidy demo would hide them.

Staging is its own copy. If a number on the page is different, the page is the one to believe. The links below were checked only as far as the sign-in page. They are the real Staging addresses, and they ask for your code before they show the day.

Before the first link

Use the administrator code. A driver code will bounce you to My Route and hide the rest.

The sign-in page is in Spanish on purpose when no one is logged in. **Código para entrar** is the code box.

Sign in

[Open Staging sign-in](https://staging.sourflour.org/login.php)

<https://staging.sourflour.org/login.php>

1. See the day as photos

Start here because this page only shows the day. It is the easiest picture of "the software was used."

Route Summary for October 1. The first time you open a link with `locale=en`, the site switches to English and remembers.

[Open Route Summary](https://staging.sourflour.org/route_summary.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/route_summary.php?date=2026-10-01&locale=en

Check the date on the page. It should be Thursday, October 1, 2026. You should see stops with a customer, an amount, and a driver. Some stops have a photo. Some do not.

Read three stops. Notice which ones look delivered and which ones do not. Do not edit anything.

2. See who was assigned the stops

Driver Assignment is where a manager builds that day's routes.

[Open Driver Assignment](#)

https://staging.sourflour.org/driver_assignment.php?date=2026-10-01&locale=en

Look for drivers, and for orders that have no driver. An unassigned order is still an order. Removing it from a route must not delete the store's bread.

Do not drag stops. Dragging saves a new route. Do not press a build or save button.

3. Open the screen the driver uses

My Route. This link asks you to choose a driver, then shows that driver's October 1 stops.

[Open My Route](#)

https://staging.sourflour.org/driver.php?date=2026-10-01&change_driver=1&locale=en

Pick any driver. You should see a list of stops, and on a phone a map of the ones still ahead. This is the reference screen in this project: one job, the next stop, then a confirmation.

Open one stop that already says delivered. Read the pieces, anything taken back, and the total. That total was frozen when the driver confirmed. Later catalog prices do not change it.

Do not press confirm, skip, or save. Do not reorder the remaining stops.

4. Open the screen the manager uses on the phone

Bakery Manager. Make the browser window narrow, or open this on your phone after you are signed in.

[Open Bakery Manager](#)

<https://staging.sourflour.org/manager.php?date=2026-10-01&locale=en>

You should see four areas: **Today**, **Routes**, **Kitchen**, and **Missed**. This page answers “what needs a person right now?” It points at the other tools. It is not a second place to rewrite the order.

Read the page as a manager would at midmorning. What looks unfinished? What would you tap next if you were allowed to?

5. Read the shift handoff

Daily Brief is one printable page for the date.

[Open Daily Brief](https://staging.sourflour.org/daily_brief.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/daily_brief.php?date=2026-10-01&locale=en

Read it as if you had just arrived and the previous person had left. What changed, what was produced, what is on the routes, what is unusual.

6. The checklist for that date

This page writes. Opening Daily Run fills in any missing orders for the coming week. It keeps edits that are already there. Do not press Generate, Close the day, or Reopen.

Daily Run is the spine of the date. The stages run from confirming demand through production, packing, routes, delivery, billing, and closing the day.

[Open Daily Run](https://staging.sourflour.org/daily_run.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/daily_run.php?date=2026-10-01&locale=en

Walk the stages with your eyes. Notice which ones look done and which ones are open. A past date can still look unfinished. That is information, not a button you need to press.

7. The orders for that Thursday

This page writes in the same way. Opening Daily Orders can also fill the coming week. Do not type in a quantity. Do not press Generate.

Daily Orders is the commercial fact for the date.

[Open Daily Orders](https://staging.sourflour.org/daily_orders.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/daily_orders.php?date=2026-10-01&locale=en

Find one store and compare the usual amount with that day's amount. If they differ, the day's amount is what October 1 means for that store. The other stores are unaffected. That is "dated beats standing, per customer," on a real row.

8. The weekly habit, which is a different page

Standing Orders is the template. It is not October 1.

[Open Standing Orders](https://staging.sourflour.org/standing_orders_manager.php?locale=en)

https://staging.sourflour.org/standing_orders_manager.php?locale=en

Look only. A change here would change future days. It must not rewrite a date that already happened.

9. The dashboard for the same date

Opening the dashboard also fills the coming week. Do not use the inline fix buttons.

Operations Dashboard. Unusual things should be louder than a quiet zero. A zero and a missing number are not the same, and the page tries to say which one you are looking at.

[Open the Operations Dashboard](https://staging.sourflour.org/index.php?date=2026-10-01&locale=en)

<https://staging.sourflour.org/index.php?date=2026-10-01&locale=en>

10. The bake plan

October 1 may say the plan was never committed. That is honest. To see what a committed plan looks like, open September 2 first. On the office copy, that Wednesday has a committed plan of 43 products.

Production Center, September 2 (the committed example).

[Open Production Center for September 2](https://staging.sourflour.org/production_center.php?date=2026-09-02&locale=en)

https://staging.sourflour.org/production_center.php?date=2026-09-02&locale=en

Production Center, October 1 (the day you have been walking).

[Open Production Center for October 1](https://staging.sourflour.org/production_center.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/production_center.php?date=2026-10-01&locale=en

Do not type in the plan. This page autosaves. Do not press Commit. Typing is a save.

Then open the baker's list for the committed date. Bakers live here, not in Production Center.

Opening Daily Production also fills the coming week. Do not press Record.

Daily Production for September 2.

[Open Daily Production](https://staging.sourflour.org/production.php?date=2026-09-02&locale=en)

<https://staging.sourflour.org/production.php?date=2026-09-02&locale=en>

You should see doughs, amounts, and formulas in grams. The baker should not have to reconstruct the order book to know what to make.

11. Packing, the van, and the bill

Pack List for October 1. Who gets what.

[Open Pack List](https://staging.sourflour.org/pack_list.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/pack_list.php?date=2026-10-01&locale=en

Do not check a box. A check is shared with the kitchen. It saves.

Route Closeout for October 1. This is where loaded bread is compared with delivered, returned, and wasted bread.

[Open Route Closeout](https://staging.sourflour.org/route_closeout.php?date=2026-10-01&locale=en)

https://staging.sourflour.org/route_closeout.php?date=2026-10-01&locale=en

This page may be empty. On the office copy, no van load was recorded for October 1. Empty means "that step was not written down," not "the day did not happen." You already saw deliveries in Route Summary. Do not create a load to make the page look finished.

Billing Center for October 1. Bills come from the delivery record. Amounts here are not retyped from today's price list.

[Open Billing Center](#)

https://staging.sourflour.org/billing_center.php?panel=invoices&range=custom&start_date=2026-10-01&end_date=2026-10-01&locale=en

Do not press Send, Generate invoice, or anything that emails a store. An empty queue is allowed. Ask what it means. Do not invent a bill.

12. Watch the same jobs as short videos

Walkthroughs. English and Spanish recordings of the real screens: sign-in, Daily Run, building and reordering a route, the manager phone, and a driver completing a stop.

[Open Walkthroughs](#)

<https://staging.sourflour.org/walkthroughs.php?locale=en>

Watch "Complete a stop" before you ever confirm a delivery yourself. The videos were recorded on a local copy of bakery data, not on Live.

When you are done

Write down three things you could not explain. Bring that list to Danny. A precise question is the point of this walk. Guessing, and then saving, is the failure.

Document 3 is the map of the other screens. You do not have to open all of them today.

Sour Flour OS intern packet, October 2026. Staging only. Thursday, October 1, 2026, unless a step names September 2.
