

The screens

This is the map. Document 2 already walked the important path. Use this when you cannot remember which page owns a job. Every link is Staging, and every date link is Thursday, October 1, 2026, unless it says otherwise.

The same warnings apply. Do not save, drag, confirm, commit, send, or check a pack-list box. The pages that also fill the coming week are marked **fills the week**.

The day, in the order the bakery cares about

Page	What it is for	Open
Bakery Manager	The manager's phone. Today, Routes, Kitchen, Missed. It points at the other tools.	Open
Operations Dashboard	One date at a glance. Unusual cases first. Fills the week.	Open
Daily Run	The checklist, from demand through close. Closeout refuses while blockers remain. Fills the week.	Open
Daily Brief	One printable handoff for the shift.	Open
Daily Orders	That date's orders. Habit beside the special amount. Fills the week.	Open
Standing Orders	The weekly habit. Not one date. The older standing-orders page is historical. Ignore it.	Open
Production Manager	A board for sensing the bake: dough, batch size, this week against last week.	Open
Production Center	Where a manager plans one delivery day and commits the bake list. Autosaves. September 2 is the committed example.	Sep 2 Oct 1
Daily Production	The baker's list, by dough. Fills the week.	Sep 2
Mix Today	Starter feedings and dough batches to mix. Fills the week.	Open
Pack List	What goes to which store. Checking a box saves for everyone.	Open
Finished Goods	Bread counted for a delivery date, and the ledger of how it moved.	Open
Driver Pickup Loads	Bread put onto a van. That moves custody. It is not the sale.	Open
Driver Assignment	Build and adjust that day's routes. Dragging saves.	Open
My Route	The driver's stops, map, and confirmation. Choose a driver on this link.	Open
Route Summary	The day as photos: customer, amount, driver.	Open
Route Closeout	Loaded versus delivered, returned, and wasted. Required before the day can close. October 1 may be empty.	Open
Route Manager	Stops, plus cash the driver still has and cash turned in.	Open
Billing Center	Mark a confirmed delivery invoiced and send the portal invoice. Amounts are read-only. Do not send.	Open

Full addresses are the link targets. If you are reading on paper, start from <https://staging.sourflour.org/> and add the page name, then `?date=2026-10-01&locale=en`.

Customers, prices, and problems

Open these when you are curious. They are not part of the first walk.

Page	What it is for	Open
Customers	The list. Search, then open a store.	Open
Customer Hub	One store: summaries and links. The editors stay on their own pages.	Open
Service Issues	Problems a customer reported: quantity, damage, billing.	Open
Text Command Center	The text-message ledger. Sending happens only on this page.	Open
Customer Schedule	Which days a store is on which zone.	Open
Pan Dulce pricing and standards	Zone prices, and the default quantities when a store has no special order.	Prices Standards

Recipes, and things you can ignore at first

Products, dough types, formulas, and ingredients are the catalog the orders point at. You can open [Formulas](#) and [Products](#) to see that a “concha” on an order is a real recipe in grams. Do not edit them.

Some old pages are still in the software under Historical Navigation. They are there so nothing from the past disappears. They are not the daily menu. If a page name says invoice and it is not Billing Center, leave it. Old invoice generators redirect to Billing Center so the bakery cannot accidentally bill from two different systems.

Counter pickup slips, the customer portal, and the SF Baker classes (courses, a baking journal, a guided week) live in this same codebase. They are real products. They are not the wholesale Thursday you just walked. Learn the Thursday first.

Videos

[Walkthroughs](#) are short English and Spanish recordings of sign-in, Daily Run, route building, the manager phone, and the driver path. Watch those before you ask to practice a save.

<https://staging.sourflour.org/walkthroughs.php?locale=en>

How to tell the pages apart when they overlap

Several screens mention routes. They are not substitutes for each other.

- **Standing Orders** is the weekly habit.
- **Daily Orders** is the promise for one date.
- **Driver Assignment** is who drives which stops that date.
- **My Route** is the driver doing the stops.
- **Route Closeout** is the van math after the route.
- **Daily Run** is the manager's checklist that the date can close.
- **Bakery Manager** is the phone view that sends you to those pages. It does not replace them.

Next: document 4, after you have clicked the day. Sour Flour OS intern packet, October 2026.
